EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 13 (Currently amended) The method of claim 12, wherein said information retrieval rate is highest of three values of said new peak rate, said most current processing rate [an] and a third user override rate.

Claim 15 (Currently amended) The method of claim 2, wherein if only a portion of said reallocated data can be restored during a processing period, remainder of said reallocated information will be restored to said <u>first</u> memory during one or more new processing periods by using said history file each time to determine how much information can be transferred during each new processing period so that said <u>first</u> memory is never under-utilized or overwhelmed by too little information or too much information transfer during any single processing period.

Claim 18 (Currently amended) A method of optimizing memory resources in a computing environment with at least one running application using message queuing, comprising:

establishing a history file containing a historical message processing rate for at least one application running in a computing environment;

storing said history file in a memory location in said computing environment;

selectively sweeping queuing information residing in or to be stored in [said] <u>a</u> first memory to an alternate memory;

Application/Control Number: 10/649,437

Art Unit: 2187

determining how much queuing information can be restored back to said first memory by unsweeping after comparing said history file including said historical message processing rate to a current message processing rate and determining current storage capacity in said first memory.

Claim 19 (Currently amended) An apparatus for optimal information transfer in a computing environment, comprising:

a first memory operable to store processing information;

an alternate memory operable to store selectively reallocated processing information initially stored or scheduled to be stored on said first memory;

a history file containing historical processing information established about a computing environment or about at least one application running in said computing environment, said history file being stored selectively on said first memory or said alternate memory;

said computing environment operable to determine an amount of said reallocated processing information to be restored back to said first memory based on historical processing information contained in said history file.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hiep T. Nguyen whose telephone number is (571) 272-4197. The examiner can normally be reached on Monday-Friday from 9:30 am to 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Donald Sparks can be reached on (571) 272-4201. The fax phone number for the organization where
this application or proceeding is assigned is 571-273-8300.
